The Honorable Kate Brophy McGee
Arizona State Senate
Capitol Complex
1700 West Washington
Phoenix, AZ 85007-2890

Dear Chairman Nancy Barto, Vice-chairman Kate Brophy McGee and members of the Senate Health and Human Services Committee:

On behalf of the Epilepsy Foundation and our Arizona affiliate the Epilepsy Foundation of Arizona, we urge you to support Senate Bill 1377, which would allow therapies derived from cannabidiol (CBD) and approved by the Food and Drug Administration (FDA) to become available to patients. Access to new therapies is particularly important for the one third of people living with epilepsy who experience intractable or uncontrolled seizures and are living with rare epilepsies, and the many more who experience significant adverse effects from their current medication.

The FDA is currently reviewing at least one CBD derived therapy that shows promise for the treatment of Dravet and Lennox Gastaut syndromes (LGS), tuberous sclerosis complex (TSC) and potentially other rare epilepsies. This potential treatment option has both Orphan Drug Designation and Fast Track Designation from the FDA and could be approved as soon as early 2018. After FDA approval, the Drug Enforcement Administration (DEA) would schedule the therapy through administrative action and the medication would become available for patients. However, since CBD is a Schedule I substance under the Arizona state drug schedule, state action is needed to ensure proper rescheduling of FDA-approved treatments derived from CBD. Unless Arizona acts, patients will not have access to these new treatments, which would be available in neighboring states that have taken action. This is an issue of creating access to FDA-approved therapies and we strongly urge your support of SB 1377.

The Epilepsy Foundation is the leading national voluntary health organization that speaks on behalf of more than 3 million Americans with epilepsy and seizures. We foster the wellbeing of children and adults affected by seizures through research programs, educational activities, advocacy, and direct services. Epilepsy is a medical condition that produces seizures affecting a variety of mental and physical functions. Approximately 1 in 26 Americans will develop epilepsy at some point in their lifetime. There is no "one size fits all" treatment for epilepsy, and about a third of people living with epilepsy suffer from uncontrolled or intractable seizures, with many more living with significant side-effects, despite available treatments. Uncontrolled seizures can lead to disability, injury, and even death.

The Epilepsy Foundation is committed to supporting physician directed care, and to exploring and advocating for all potential treatment options for epilepsy. Bureaucratic processes should not stand in the way of patients gaining access to proven and potentially lifesaving treatment once they have been reviewed and approved by FDA. The Epilepsy Foundation and the Epilepsy Foundation of Arizona urge your support of Senate Bill 1377. Please do not hesitate to contact Angela Ostrom, Chief Legal Officer & Vice President Public Policy, at 301-918-3766 or aostrom@efa.org or Suzanne Matsumori with the Epilepsy Foundation of Arizona at 602-406-3581 or suzannem@epilepsyaz.org with any questions or concerns.

Sincerely,

Suzanne Matsumori
Executive Director
Epilepsy Foundation of Arizona
